*Infectious Agents and Disease*
3:329–332 © 1994 Raven Press, Ltd., New York

# Infectious Agents and Disease
# Volume 3, 1994

## Subject Index

Abscess formation
  bacterial structure and function, 256
Acquired immunodeficiency syndrome (AIDS)
  non-nucleoside reverse transcriptase inhibitors for HIV infection, 313
  research and public policies, 194
Adenoviruses
  molecular basis of pathogenesis, 1
  TNF-mediated cell death and inflammation, 106
Aleutian mink disease, 279
Antibiotics
  medical compliance in outpatient management of infection, 266
  *Staphylococcus aureus* subpopulations, 302
Antibodies
  recognition of viral antigens, 155
Antigens
  *Chlamydia trachomatis*, in immunity and pathogenesis, 218
Apicomplexans
  malaria and plants, 29
Apoptosis
  poxviral modifiers of cytokine responses to infection, 116
  TNF-mediated, by adenoviruses, 106

Bacteria
  structure and function, in abscess formation, 256
*Bacteroides fragilis*
  structure and function, in abscess formation, 256
Bats
  rabies infections, 168
Book Review
  *Medical Microbiology*, 50
Bunyaviridae
  hantavirus epidemic, 234

Cell death
  TNF-mediated, by adenoviruses, 106
Cervical cancer
  papillomavirus vaccines, 187
Chemokine receptors, and molecular mimicry, herpesviruses, 137
Chemotherapy
  photosynthesis, and malaria and other apicomplexans, 29
Children and infants
  immunization to hepatitis A, 38
*Chlamydia trachomatis*
  antigens, in immunity and pathogenesis, 218
*Cis*-acting signals
  coronavirus replication, 98
  influenza virus RNA synthesis, 77
Compliance
  medical, in outpatient management of infection, 266
Coronavirus
  RNA replication and transcription, 98
Creutzfeldt-Jacob disease
  prion proteins, and scrapie agent, in neuroblastoma cells, 54
Cytokines
  Aleutian mink disease, 279
  and molecular basis of adenovirus pathogenesis, 1
  poxviral modifiers, in infection, 116
Cytomegalovirus
  glycoprotein B homologues, 9
Cytotoxicity
  adenovirus, molecular basis of pathogenesis, 1
  TNF-mediated, by adenoviruses, 106

DNA
  plastid, malaria and other apicomplexans, 29
Dogs
  rabies infections, 168
Drug resistance
  tuberculosis, 245

Economics, health
  medical compliance in outpatient management of infection, 266
Editorials
  Current Frontiers in Virology, 53
  Destruction of Smallpox Virus Stocks in National Repositories: A Grave Mistake and a Bad Precedent, 215
  Promoting Laboratory Research during Infectious Diseases Fellowship Training or Telling the Truth About Training in Clinical Research, 163
Education
  teaching vs. learning microbiology, 275
Electron transport
  *Staphylococcus aureus* subpopulations, 302

Epidemics
AIDS, research and public policies, 194
hantavirus, 234
Epidemiology
AIDS, research and public policies, 194
hantavirus epidemic, 234
RNA virus quasispecies, 201
Epstein-Barr virus
glycoprotein B homologues, 9
protein LMP2A, regulation of reactivation, tyrosine kinases in sIg-mediated signal transduction, 128
Eukaryotes
trypanosomatid protozoa, 181

Food
safety program, 324
Fox
rabies infections, 168

Gene expression
adenovirus, molecular basis of pathogenesis, 1
HSV-1 regulatory protein, splicing inhibition, 59
RNA-sequence-mediated regulation, in HIV-1, 68
RNA virus quasispecies, 201
Genital tract
papillomavirus vaccines, 187
Genome replication
coronavirus, 98
hepatitis B virus reverse transcription, 85
hepatitis delta virus, 94
RNA virus quasispecies, 201
Glycoprotein B
homologues, of herpesviruses, 9
Glycoproteins
adenovirus, molecular basis of pathogenesis, 1
Guidelines
health care workers, and drug-resistant tuberculosis, 245

Hantavirus
epidemiology and etiology, 234
Health care workers
and drug-resistant tuberculosis, 245
Heat shock protein
*Chlamydia trachomatis* antigens, 218
Hepadnavirus
genomic replication, hepatitis B virus reverse transcriptase, 85
Hepatitis A
immunization to, 38
Hepatitis B
delta virus, pathogenesis and replication, 94
virus, reverse transcriptase, in hepadnaviral genomic replication, 85
Herpesvirus
chemokine receptors, 137
Epstein-Barr virus protein LMP2A, regulation of reactivation, tyrosine kinases in sIg-mediated signal transduction, 128
glycoprotein B homologues, 9
HIV-1, RNA-sequence-mediated regulation, 68
HSV-1 regulatory protein, splicing inhibition, 59
Historical perspective
rabies, 168
Human immunodeficiency virus
AIDS, research and public policies, 194
non-nucleoside reverse transcriptase inhibitors, 313

ICP27
HSV-1 regulatory protein, splicing inhibition, 59
Immune response
Aleutian mink disease, 279
*Chlamydia trachomatis* antigens, 218
and molecular basis of adenovirus pathogenesis, 1
Immunization
against hepatitis A, 38
Infections
abscess formation, bacterial structure and function, 256
AIDS, research and public policies, 194
HIV, non-nucleoside reverse transcriptase inhibitors, 313
medical compliance in outpatient management, 266
parvovirus, Aleutian mink disease, 279
poxviral modifiers of cytokine responses, 116
*Staphylococcus aureus* variant subpopulations, 302
Infectivity
and glycoprotein B homologues, in herpesviruses, 9
Inflammation
chemokine receptors, and molecular mimicry by herpesviruses, 137
TNF-mediated, by adenoviruses, 106
Influenza virus
RNA synthesis, role of *cis*- and *trans*-acting factors, 77
Interferon
poxviral modifiers, responses to infection, 116
Interleukin-1
poxviral modifiers, responses to infection, 116
Interleukin-6
Aleutian mink disease, 279

Major histocompatibility complex
immune recognition of viral antigens, 155
Malaria
and other apicomplexans, 29
Microbiology
food safety program, 324
teaching vs. learning, 275
Monitoring
medical compliance in outpatient management of infection, 266

Neoplasms
cervical cancer, papillomavirus vaccines, 187
Nucleoprotein
*cis*- and *trans*-acting factors in RNA synthesis, of influenza virus, 77

Papillomavirus
vaccines, 187
Phylogenetics
RNA virus quasispecies, 201
Plants
and malaria and other apicomplexans, 29
Polyadenylation
*cis*- and *trans*-acting factors in RNA synthesis, of influenza virus, 77
HSV-1 regulatory protein, splicing inhibition, 59
trypanosomatid protozoa, 181
Polysaccharides
bacterial structure and function, in abscess formation, 256
Poxviral modifiers
cytokine responses to infection, 116
Prion protein
and scrapie agent, in neuroblastoma cells, 54
Process control
microbiological food safety program, 324
Proteins
HSV-1 regulatory, splicing inhibition, 59
prion, and scrapie agent, in neuroblastoma cells, 54
Protozoa, trypanosomatid
eukaryotic biology, 181
Pseudorabies virus
glycoprotein B homologues, 9
Public health issues
AIDS, research and public policies, 194
medical compliance in outpatient management of infection, 266

Rabies
historical perspective, 168
Raccoon
rabies infections, 168
Receptors
chemokines, and molecular mimicry, herpesviruses, 137
Respiratory disease
hantavirus pulmonary syndrome, 234
Reverse transcriptase
hepatitis B virus, in hepadnaviral genomic replication, 85
non-nucleoside inhibitors, for HIV infection, 313
Risk groups
immunization to hepatitis A, 38
RNA
encapsidation, hepatitis B virus reverse transcriptase, 85
gene regulation in HIV-1, 68
genomic replication, coronavirus, 98
genomic replication, hepatitis delta virus, 94
HSV-1 regulatory protein, splicing inhibition, 59
influenza virus, role of *cis*- and *trans*-acting factors, 77
trypanosomatid protozoa, 181
virus quasispecies, 201

Scrapie
and prion protein, in neuroblastoma cells, 54
Signal transduction
chemokine receptors, and molecular mimicry by herpesviruses, 137
sIg-mediated, Epstein-Barr virus protein LMP2A, regulation of reactivation, 128
Skunks
rabies infections, 168
Small colony variants
*Staphylococcus aureus* subpopulations, 302
Splicing
host cell, and HSV-1 regulatory protein, 59
Spongiform encephalopathy
prion proteins, and scrapie agent, in neuroblastoma cells, 54
*Staphylococcus aureus*
variant subpopulations, 302
Syncytium
herpesvirus, glycoprotein B homologues, 9

T lymphocytes
immune recognition of viral antigens, 155
Tat
gene regulation in HIV-1, 68
Tissue culture
neuroblastoma N2a cells, prion protein and scrapie agent, 54
*Trans*-acting signals
influenza virus RNA synthesis, 77
trypanosomatid protozoa, 181
Transcription
*cis*- and *trans*-acting factors in RNA synthesis, of influenza virus, 77
trypanosomatid protozoa, 181
Transfection
HSV-1 regulatory protein, splicing inhibition, 59
Trypanosomatid protozoa
eukaryotic biology, 181
Tuberculosis
drug resistance, 245
Tumor necrosis factor
adenovirus, molecular basis of pathogenesis, 1
in cell death and inflammation by adenoviruses, 106
Tyrosine kinases
in sIg-mediated signal transduction, Epstein-Barr virus protein LMP2A, regulation of reactivation, 128

Vaccines
AIDS, research and public policies, 194
*Chlamydia trachomatis* antigens, 218
immunization to hepatitis A, 38
papillomavirus, 187
rabies, 168
RNA virus quasispecies, 201
Varicella zoster virus
glycoprotein B homologues, 9
Virus
adenovirus, molecular basis of pathogenesis, 1

adenoviruses, TNF-mediated cell death and inflammation, 106
Aleutian mink disease, 279
antigens, immune recognition of, 155
coronavirus, replication and transcription, 98
Epstein-Barr virus protein LMP2A, sIg-mediated signal transduction, 128
hepatitis B, reverse transcriptase, in hepadnaviral genomic replication, 85
hepatitis delta, pathogenesis and replication, 94
herpesvirus, chemokine receptors, 137
herpesviruses, glycoprotein B homologues, 9
human immunodeficiency, non-nucleoside reverse transcriptase inhibitors, 313
influenza, role of *cis*- and *trans*-acting factors in RNA synthesis, 77
papillomavirus, vaccines, 187
poxviral modifiers of cytokine responses to infection, 116
rabies, historical perspective, 168
RNA quasispecies, 201

Warts
papillomavirus vaccines, 187
Wolf
rabies infections, 168
